18) (Currently Amended): A package according to claim 11 where the said retention means on said closure [is the] are the top, bottom and side surfaces at the periphery of said closure top panel and the retention means on the container consists of a bead being at or near the said open end of the said second generally cylindrical sidewall and a reduced diameter of said second generally cylindrical sidewall below said [engaging] bead to form a ledge that limits the distance the closure can be inserted into the container.

19) (Currently Amended): A package according to claim 18 having said elevating means including an inclined surface protruding from [the] said interior surface of said container second generally cylindrical sidewall near said opening below said retention means and a generally vertical spline protruding from said closure sidewall a sufficient distance so that the bottom surface of said spline will contact and move up said inclined surface as said closure is rotated with respect to said container to disengage said closure from said container to open the package,
